- Alameda, CA, US 94501

PROFILE

Fully immersed in React, Redux, Node in TypeScript. Engineered products from 0 to 1 with multiple start-ups. Currently deep in LLM/GPT integration and application.

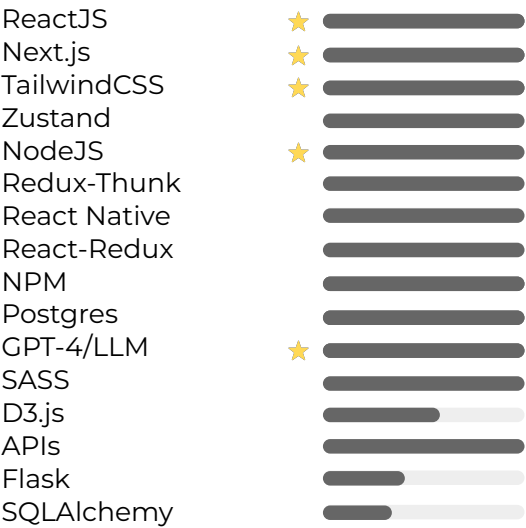

Experienced in both start-up and established environments. Detail-oriented, always excited to learn new things. Project after project, learning new tech and efficiency techniques to add to my arsenal.

EXPERIENCE

○ Full-Stack Engineer

Squared | Jan 2023 - Jun 2025

Using ReactJS in Next, Redux, Node to engineer uniquely designed UI and seamless user experience, dynamic and static routes, responsively built application page components, and additional technologies for advanced API integration.

- Engineered and optimized React UI Components: Rich Text Editor, Context Menu, 404 page, etc.
- Implemented end-to-end features: system for Github Commit Syncing with workspace via Github Webhooks, Github OAuth, assignees, etc.
- Spearheaded database migrations, and orchestrating versioning of MongoDB and Postgres collections to ensure data integrity and scalability
- Modernized legacy codebase: JavaScript to TypeScript, refactoring Redux implementations, to improve maintainability and performance

○ Front-End Developer

Co.Lab, joincolab.io | Jun 2022 - Aug 2022

Engineered in JavaScript, Electron, and AppleScript with Product Managers and UX/UI designers in Agile/SCRUM Development to develop MacOS application Multitask.

- Engineered Client-side functionality and design
- Optimized user experience: reliability and speed by 55% (~1250ms)

○ Front-End React Developer

Omnes Education | Jan 2022 - May 2022

React, Redux, Node engineering with Omnes Education as front-end lead for developing start-up OmniConnX. Developing client-side rendered React Components.

- Exemplified leadership characteristics under a rigorous timeline and increased workflow by 25%.
- Consolidated SDLC, restructured to be responsive to mobile, and assisted back-end operations and maintenance

Education

Dominican University of California, San Rafael, CA - 2022 | B.S. in Applied Computer Science (Front End Specialization)

- **Front-End Focused Curriculum:**

Native Development with JavaScript, Writing JavaScript Libraries, Data Visualization & Web Graphics, Query Languages, JavaScript Foundations, Web Design & Advanced CSS

- **Sprint Product Development Curriculum & Software Engineering Curriculum:**

Data Structures & Algorithms,	Entrepreneurship,
Authentication & Authorization,	Agile Development,
Testing,	UX/UI,
Web Analytics	Market Research,
	Industry Collaboration

- **Back-End Focused Curriculum:**

Server-Side Architectures and Frameworks, Authentication and Queries, Docker DevOps & Deployment

Projects

○ MunchAI

LLM Integrated Foodie App | Jun 2025 - Present

MunchAI is an AI-powered food discovery app, combining GPT-4 based on expert reasoning, custom LLM behavior with real-time user analysis and image-based dish insights.

Designed custom tools and memory architecture, enabling intelligent and expert recommendations beyond basic search

Technologies used:

Front-End: NextJS, TypeScript, NodeJS, React (in Next), TailwindCSS, Framer Motion

Backend: Postgres, Drizzle ORM, OpenAI GPT-4, OpenRouter, Custom LLM Tool integrations, LLM Streaming, Custom LLM Behavior Shape

○ CryptoTrack

Crypto Currency Tracker App | 2022

CryptoTracker visualizes all cryptocurrencies' data with D3.js, TailwindCSS, history, trends, and conversions.

○ Multitask

MacOS Desktop Zoom Application | 2022

JavaScript, HTML, CSS in Electronjs with AppleScript, Multitask is a downloadable MacOS desktop application that allows a Zoom meeting participant to quickly perform Zoom Tasks, no matter where or what application they are using during their meeting
